SUMMARY

Final-year Software Engineering student and frontend developer who ships production software. Sole frontend developer on a role-based exam platform in React and TypeScript, and independently built and deployed four live web apps spanning payments, AI integration and embeddable widgets. Comfortable owning a feature end to end — data model, UI, tests, CI and deploy.

EXPERIENCE

Frontend Developer Intern · UniMetrik Jun 2026 – Present
E-SINAV — exam & quiz platform for schools · React, TypeScript, Chakra UI, TanStack Query, Vite

- Own the entire frontend of a role-based exam platform — **80+ TypeScript modules across 12 feature domains**, with permission-gated routing for student, teacher and admin roles.
- Delivered the question library (four question types), quiz builder with publishing and print export, exam calendar, per-question result analytics, and an admin permissions console.
- Wrote **59 Vitest unit tests** and **5 Playwright end-to-end journeys** over the critical student, teacher and admin paths; built the **GitHub Actions pipeline** running lint, typecheck, tests and build on every pull request.
- Refactored grading into a pure module independent of application state and lazy-loaded routes to cut bundle size; work in feature branches under pull-request review and co-authored the team's architecture document and REST conventions.

PROJECTS

AURELIA — Hotel Booking System aurelia-booking.vercel.app
React 19 · Vite · Framer Motion · EmailJS

- Built a booking flow on a real availability engine: half-open date ranges so checkout day is never charged as a night, multi-unit room types, and write-time re-validation preventing double-booking.
- Persistence sits behind one async repository module, so swapping the JSON store for a database touches a single file; ISO date strings throughout eliminate timezone bugs.

MiniStore — E-Commerce Store mini-store-olive.vercel.app
React 19 · React Router · Stripe · Vercel Serverless Functions

- Shipped a ten-page storefront with cart drawer, filtering, pagination and **Stripe Checkout** via a serverless API route, supporting delivery and store pickup with time-slot selection.
- Prices resolve **server-side and are never trusted from the client** — the checkout session is built only from server data, closing the price-tampering hole.

Northgate — Embeddable AI Support Widget ai-support-widget-sand.vercel.app
React 19 · Google Gemini API · Vercel Node Functions · SSE streaming

- Built an AI support chat any site embeds with **one script tag** — it mounts into a **shadow root** with inlined styles so host CSS cannot break it, and ships as a self-contained **66 KB gzipped bundle**.
- One shared module drives both the page content and the model's system prompt, so quoted prices never drift from displayed ones; responses stream over SSE and the LLM provider swaps in one file.

Personal Portfolio otabekmamadaliev.com
React · Vite · Framer Motion · Cloudflare DNS · Vercel CI/CD

- Localised into four languages** (English, Uzbek, Polish, Russian) on a custom domain, with project cards rendering live, responsively scaled previews of each deployed site.

SKILLS

Languages	TypeScript, JavaScript, Python, HTML, CSS
Frontend	React, React Router, Chakra UI, TanStack Query, Framer Motion, Vite, responsive & mobile-first design, accessibility
Backend & Data	Node.js, REST API design, serverless functions, PostgreSQL, Stripe, Google Gemini API
Testing & Tools	Vitest, Playwright, GitHub Actions, Git & pull-request workflow, Docker, Vercel, Linux (Ubuntu, WSL)

EDUCATION

BSc Software Engineering · Kielce University of Technology Oct 2023 – Feb 2027 (expected)

ACHIEVEMENTS

- 2nd place**, Provincial Competitive Programming Olympiad — among ~600 participants, Namangan Province.
- 1st place**, Regional Informatics Olympiad — three consecutive years (2019–2021).

LANGUAGES

- Uzbek — Native
- English — Professional working proficiency
- Polish — Beginner
- Russian — Beginner
