SUMMARY

Final-year Software Engineering student and full-stack developer with hands-on experience delivering React/TypeScript and Django/PostgreSQL systems. Shipped live products spanning payments, AI streaming, booking logic and a 75-platform privacy reference site. Comfortable owning data models, APIs, interfaces, automated tests, CI and deployment.

EXPERIENCE

Full Stack Web Developer · Erciyes University - Erasmus+ Internship

Jul - Aug 2026

UniQ - university exam and quiz platform · React, TypeScript, Chakra UI, TanStack Query · Django, DRF, PostgreSQL, Docker

- Built a role-based exam platform across **99 TypeScript modules in 12 feature domains**, including question management, quiz publishing, exam scheduling, analytics and permission-gated routing for student, teacher and admin roles.
- Implemented Django REST Framework authentication with JWT access/refresh, a custom user model, email verification and password reset; protected every endpoint by default except the health probe.
- Wrote **125 automated tests** (Vitest, pytest and Playwright) and configured GitHub Actions to run lint, type checks and test suites on every pull request.
- Standardized development with Docker Compose for PostgreSQL, Django and Vite; contributed the ER model, API design, test plan and REST endpoint conventions.

SELECTED PROJECTS

Delete Anything - Account Deletion Reference

deleteanything.com

Node.js · HTML · CSS · JavaScript · Custom build pipeline · SEO

- Built and deployed a searchable privacy reference covering **75 platforms across 88 generated pages**, including direct deletion guides, a browser-local planner, export guidance and comparison tools.
- Engineered a dependency-free Node.js pipeline for page generation, canonical metadata, JSON-LD, sitemap and HTML validation; added outbound-link monitoring and weekly GitHub Actions health checks.

AURELIA - Hotel Booking System

aurelia-booking.vercel.app

React 19 · Vite · Framer Motion · EmailJS

- Built an availability engine with half-open date ranges, multi-unit room types and write-time revalidation to prevent double bookings; isolated persistence behind one async repository module.

MiniStore - E-Commerce Store

mini-store-olive.vercel.app

React 19 · React Router · Stripe · Vercel Serverless Functions

- Shipped a ten-page storefront with filtering, pagination and Stripe Checkout; resolved prices server-side so checkout never trusts client-supplied totals.

Northgate - Embeddable AI Support Widget

[Live project](#)

React 19 · Gemini API · Vercel Node Functions · SSE

- Built a one-script support widget using Shadow DOM isolation and SSE streaming, delivered as a self-contained **66 KB gzipped bundle** with a swappable LLM provider.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend	React, React Router, Chakra UI, TanStack Query, Framer Motion, Vite
Backend and Data	Django, Django REST Framework, JWT, Node.js, REST APIs, PostgreSQL
Testing and Tools	Vitest, Playwright, pytest, CI/CD, Docker, Git, GitHub Actions, Vercel, Linux

EDUCATION

BSc Software Engineering · Kielce University of Technology

Oct 2023 - Feb 2027 (expected)

ACHIEVEMENTS

- 2nd place**, Provincial Competitive Programming Olympiad - among ~600 participants, Namangan Province.
- 1st place**, Regional Informatics Olympiad - three consecutive years (2019-2021).

LANGUAGES

- Uzbek - Native
- English - Upper-intermediate (B2+)
