SUMMARY

Final-year Software Engineering student and full stack web developer. Built a university exam platform on an Erasmus+ internship — React and TypeScript on the front, Django and PostgreSQL behind it — and independently shipped four live web apps spanning payments, AI integration and embeddable widgets. Comfortable owning a feature end to end: data model, API, UI, tests, CI and deploy.

EXPERIENCE

Full Stack Web Developer · Erciyes University — Erasmus+ Internship Jul – Aug 2026

E-SINAV — university exam & quiz platform · React, TypeScript, Chakra UI, TanStack Query · Django, DRF, PostgreSQL, Docker

Frontend: built a role-based exam platform across **99 TypeScript modules in 12 feature domains** — question library (four question types), quiz builder with publishing and print export, exam calendar, per-question analytics and an admin permissions console — with permission-gated routing for student, teacher and admin roles.

Backend: built the authentication service in **Django REST Framework** — JWT access/refresh, custom user model, email-verified student registration and password reset — and closed the API by default so every endpoint requires auth except the health probe.

Wrote **125 automated tests** (70 Vitest, 50 pytest, 5 Playwright end-to-end) and built the **GitHub Actions CI** running lint, typecheck and both suites on every pull request.

Set up the **Docker Compose** environment (PostgreSQL, Django, Vite) plus SQL schema and seed data, so the whole team develops against an identical stack.

Work in feature branches under pull-request review; co-authored the architecture document (ER diagram, API design, test plan) and the team's REST endpoint conventions.

PROJECTS

AURELIA — Hotel Booking System aurelia-booking.vercel.app

React 19 · Vite · Framer Motion · EmailJS

Built a booking flow on a real availability engine: half-open date ranges so checkout day is never charged as a night, multi-unit room types, and write-time re-validation preventing double-booking.

Persistence sits behind one async repository module, so swapping the JSON store for a database touches a single file; ISO date strings throughout eliminate timezone bugs.

MiniStore — E-Commerce Store mini-store-olive.vercel.app

React 19 · React Router · Stripe · Vercel Serverless Functions

Shipped a ten-page storefront with cart drawer, filtering, pagination and **Stripe Checkout** via a serverless API route, supporting delivery and store pickup with time-slot selection.

Prices resolve **server-side and are never trusted from the client** — the checkout session is built only from server data, closing the price-tampering hole.

Northgate — Embeddable AI Support Widget ai-support-widget-sand.vercel.app

React 19 · Google Gemini API · Vercel Node Functions · SSE streaming

Built an AI support chat any site embeds with **one script tag** — it mounts into a **shadow root** with inlined styles so host CSS cannot break it, and ships as a self-contained **66 KB gzipped** bundle.

One shared module drives both the page content and the model's system prompt, so quoted prices never drift from displayed ones; responses stream over SSE and the LLM provider swaps in one file.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend	React, React Router, Chakra UI, TanStack Query, Framer Motion, Vite, responsive & mobile-first design, accessibility
Backend & Data	Django, Django REST Framework, JWT auth, Node.js, REST API design, PostgreSQL, Stripe, Google Gemini API
Testing & Tools	Vitest, Playwright, pytest, GitHub Actions CI, Docker Compose, Git & pull-request workflow, Vercel, Linux

EDUCATION

BSc Software Engineering · Kielce University of Technology Oct 2023 – Feb 2027 (expected)

ACHIEVEMENTS

- 2nd place, Provincial Competitive Programming Olympiad — among ~600 participants, Namangan Province.
- 1st place, Regional Informatics Olympiad — three consecutive years (2019–2021).

LANGUAGES

- Uzbek — Native
- English — Upper-intermediate
- Polish — Beginner
- Russian — Beginner
